COMANCHE COUNTY RURAL WATER DISTRICT NO. 3 2013 Annual Drinking Water Quality Report

We are pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is and has always been, to provide you a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve our water supply and protect our water resources. We are committed to insuring the quality of your water. We have two sources of water: 1) Groundwater. Our groundwater is drawn from the Cache Creek alluvium by four wells, located west of Walters. 2) Surface water: purchased from the City of Lawton, which is treated water from Lake Lawtonka.

This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact Karen Bishop at (580) 355-1343. We want our customers to be informed about their water. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of every month, 7:00 pm, at the district's office located at 5845 SE 90<sup>th</sup> Street, Lawton, Oklahoma.

Comanche County Rural Water District No. 3 routinely monitors for constituents in your drinking water according to Federal and State laws. The following table shows the monitoring results of our groundwater source for the period of January 1<sup>st</sup> to December 31, 2013 (some of our data may be more than one year old because the state allows us to monitor for some contaminants less often than once a year) and a copy of the monitoring results from the City of Lawton on the water we purchased during the time period above. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In the table below you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

- Non-Detects (ND) – laboratory analysis indicates that the constituent is not present.
- Parts per million (ppm) or Milligrams per liter (mg/L), Parts per billion (ppb) or Micrograms per liter (ug/L)
- Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.
- Action Level (AL) - The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, which a water system must follow.
- Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.
- Maximum Contaminant Level (MCL) - The MCL is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal (MCLG) - The MCLG is the level of a contaminant in drinking water below, which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- MCL's are very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

There are seventy-six regulated contaminants that community water systems are required to test for including microbiological, radioactive, inorganic, synthetic organic including pesticides, and herbicides, and volatile organic contaminants. The tables below show only those contaminants that are detected. The first table is for our groundwater source. The second table is for the water purchased from the City of Lawton. We have a source water protection plan available from our office that shows the vulnerability to be high in our well area. Additionally more information such as potential sources of contamination is listed.

TEST RESULTS: Groundwater Source: Cache Creek Alluvium

Contaminant	Y/N Violation	Level Detected	Range Detected	MCL	MCLG	Likely Source of Contamination

<b>DISINFECTION BY PRODUCTS</b> 1. Total Trihalomethanes (THM)	N	13 ug/L 2013	0 – 14.3 ug/L	80	80	By-product of drinking water chlorination
2. Total Haloacetic Acids (HAAS)	N	1.0 ug/L 2013	< 6.0 ug/L 2013	60	60	By-product of drinking water chlorination
<b>SYNTHETIC ORGANIC CHEMICALS</b> 1. Glyphosate	N	< 5.0 ug/L 10/27/2011		700	700	Runoff from Herbicide Use

\* Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short period time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health provider.

What does this mean? As you can see by the table, our system had no violations. We are proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water is SAFE at these levels.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can be polluted by animals or human activity. Contaminants that may be present in untreated water include: Microbial contaminants, such as virus and bacteria; Inorganic contaminants, such as salts and metals; pesticides and herbicides; Organic chemicals from industrial or petroleum use, and Radioactive contaminants, which are naturally occurring. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

This report has been published in its entirety, along with a copy of the water quality report for the water that we purchase from the City of Lawton. This report will not be mailed to each member, but is available at the district office upon request, as is the Source Water Assessment Program Report. Should you have any questions concerning this Consumer Confidence Report, please do not hesitate to contact our office at (580) 355-1343.

Sincerely, Dee Davis / Chairman / Rural Water District No. 3, Com. Co.

*Dear Water system owner/operator:* The following results are from analytical testing conducted on the finished water for the Lawton Water Treatment Plants at both the Medicine Park and the Southeast locations. These results are contaminants detected for the 2013 calendar year. This information should be used to publish your annual Consumer Confidence or Water Quality Report (if required) to comply with EPA 40 CFR 141 and 142. If you have any questions please call 580-529-2703.

**UNCOMFORTABLE?**

Does your home have any of these symptoms?

☐ Rooms that get too hot or too cold?

☐ High utility bills?

☐ Thermostat wars with your spouse?

☐ High humidity in summer?

☐ House just never seems comfortable?

☐ There doesn't seem to be enough airflow?

☐ Dust buildup within 2 days of dusting?

☐ Problems with your system since it's been installed?

☐ Anyone with allergies or asthma?

☐ AC starts and stops frequently or runs all the time, and house is still not cool?

☐ Have been told by other contractors that the problem cannot be fixed?

If you answered **YES** to any of these questions, we can help!

Pippin Brothers has specialists that can pinpoint and correct these problems and, in many cases, you don't even have to replace your equipment, with the solution usually being easier and costing a lot less than you may think. There is no other contractor in Lawton more qualified than Pippin Brothers at diagnosing and correcting these annoying, inconvenient, unhealthy, comfort-compromising and energy-wasting concerns. Call us today and let us make your home **Feel As Good As It Looks!** After all, your home is your largest investment and you and your family deserve to be comfortable - don't you?
